

YekBûn — Device Control Mobile APIs

Short handoff for mobile developers · Auth not required · Base: <https://api.appdash.yekbun.org/api>

Overview

On app boot, call **Resolve Profile** and apply returned **runtime** + **cache** rules. Send **Telemetry** periodically (heartbeat). On crash/ANR, call **Crash Report**.

Endpoints

Method	Path	Purpose
GET / POST	/api/app/device-profile	Resolve device / runtime / cache profile
POST	/api/app/device-telemetry	Heartbeat upsert by device_id
POST	/api/app/device-crash	Crash / ANR report → problem group

1. Resolve Profile

GET or POST /api/app/device-profile

Query/body params: **ram** (e.g. "4 GB") or **ram_class** (4|6|8|12+), **cpu_tier** (low|mid|high|flagship|entry), **os**, **os_version**, **manufacturer**, **model** (optional).

Request example

```
GET /api/app/device-profile?ram=4%20GB&cpu_tier=low&os=Android&os_version=13
```

Response (trimmed)

```
{
  "success": true,
  "message": "Device profile resolved.",
  "data": {
    "matched_by": { "ram_class": "4", "cpu_tier": "low", "platform": "android" },
    "profile": {
      "key": "low", "name": "Low", "version": "v1.14.1",
      "cache_profile_key": "low", "runtime_profile_key": "low",
      "memory": { "max": 900, "warn": 700, "critical": 820 },
      "fallback": { "auto_downgrade": true, "max_crash_rate": 2 }
    },
    "runtime": {
      "key": "low",
      "api": { "max_parallel": 3, "retry": "smart", "timeout_ms": 15000 },
      "feed": { "batch_size": 8, "strategy": "lazy" },
      "video": { "quality": "480p", "max_active": 2 },
      "reels": { "initial": 1, "strategy": "lazy" },
      "rendering": { "image_quality": "medium", "strategy": "minimal" },
      "network": { "mode": "conservative", "bandwidth_saver": true }
    },
    "cache": {
      "key": "low",
      "allocation": { "total_size": 336, "max_size": 403 },
      "categories": [{ "id": "feed", "max_size": 34, "priority": "high" }],
      "cleanup": { "mode": "automatic" },
      "sync": { "on_app_start": true, "wifi_only": false }
    }
  }
}
```

2. Telemetry Heartbeat

POST /api/app/device-telemetry

Required: **device_id**. Upserts row; use for periodic health sync.

```
{
  "device_id": "D-abc123",
  "user_id": "optional_if_logged_in",
  "name": "Galaxy A14", "model": "SM-A145F", "manufacturer": "Samsung",
  "os": "Android", "os_version": "13", "ram": "4 GB", "cpu_tier": "Low",
  "profile_key": "low",
  "cache_used_pct": 84, "memory_usage_pct": 92, "fps": 32,
  "health_score": 42, "crash": "None", "crash_count": 0,
  "status": "healthy", "app_version": "3.14.2", "app_version_bucket": "latest"
}
```

3. Crash / ANR Report

POST /api/app/device-crash

Required: **device_id**. Groups problems; bumps crash count on telemetry.

```
{
  "device_id": "D-abc123",
  "problem_type": "OutOfMemory",
  "crash_cause": "OutOfMemory in FeedRenderer.mountItem()",
  "crash_signature": "OOM · FeedRenderer#mountItem",
  "affected_screen": "Feed",
  "profile_key": "low",
  "os": "Android", "os_version": "13", "ram": "4 GB", "cpu_tier": "Low",
  "manufacturer": "Samsung", "model": "SM-A145F",
  "app_version": "3.14.2", "memory_at_crash": 96, "severity": "Critical"
}
```

Notes

- Auth not required for these three endpoints.
- Seeded profiles: Entry / Low / Balanced / High / Ultra.
- Apply **runtime** + **cache** from resolve response locally after boot.
- Content-Type: application/json for POST bodies.
